

National Severe Weather Warning Service

Chief Forecasters Assessment

Another frontal system will approach southwest England later Wednesday and move northeastwards across southern parts of England during Thursday.

Convective elements embedded in the fronts have potential for up to 15 mm in an hour and perhaps 30 mm in 3 hours in places. Expect rain totals of 15 to 25 mm quite widely and as much as 40 to 50 mm in the wettest parts by the end of the day. The rain will gradually ease from the southwest.

The public should be aware of the potential for localised flooding and disruption to travel.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **00:05 on Thu, 11th Oct 2012** until **20:00 on Thu, 11th Oct 2012**

Further rain, heavy at times, will spread northeast across the region during Thursday. With the ground already saturated and rivers running high the public should be aware that there is a risk of localised flooding and disruption to travel.
